

CACI Welcomes National Security Research, Inc.

By Michael Pino

On October 19, 2005, CACI formally welcomed its newest team members, the employees of National Security Research, Inc. (NSR), with an orientation and reception at our Ballston, Virginia headquarters. CACI's acquisition of NSR had been finalized just two days earlier.

The NSR team now becomes an operating group within Gil Guarino's Transformation Solutions Business Group (TSG). Our new colleagues specialize in helping to strengthen U.S. national security policy and solutions in the command and control, homeland security, international security, and missile defense markets, for both federal government and industry customers.

CACI Chairman, President, and CEO Dr. J.P. (Jack) London described the acquisition as "a strategic integration of capabilities that support CACI's target growth areas in homeland security and national priorities related to the war on terrorism. This is a great addition for our team."

The majority of NSR employees are cleared staff with significant proficiency in their fields, and senior executives average more than 30 years of high-level government experience.

As Gil notes, the acquisition provides CACI with "extraordinary levels of sophistication and domain expertise. We'll open new doors by combining NSR's subject-matter expertise and access to the highest government echelons with CACI's outstanding technical solutions and capabilities."

Andy Riddile, Senior Vice President for the new team, adds, "With CACI,

we have greater reachback capabilities in supporting our clients and their vital missions. And as we enhance our services, we will grow and bring CACI solutions into more client areas. We also expect to bring our senior-level

perspectives on national security to help provide context and opportunities to the rest of the company. We are delighted to be part of Team CACI."

For more information, contact Andy at (703) 647-4122, ariddile@caci.com.

Making a Great First Impression: CACI-NSR Receives Regional Ethics Award

Shortly after the NSR acquisition, CACI announced the new teammates had received the 2005 National Capital Region Ethics Award in its class. What a great way to begin their CACI careers!

Presented by the Greater Washington and Northern Virginia Chapters of the Society of Financial Service Professionals, the ethics awards recognize organizations that exemplify a strong commitment to business excellence

and the highest standards of civic and social responsibility, integrity, and ethical conduct.

Commenting on the award, CACI President of U.S. Operations Paul Cofoni said, "This demonstrates NSR's exceedingly good fit with CACI's corporate culture of honesty and integrity in everything we do."

Training for Today's Threat

By Al Maiorano and Gary Lawson

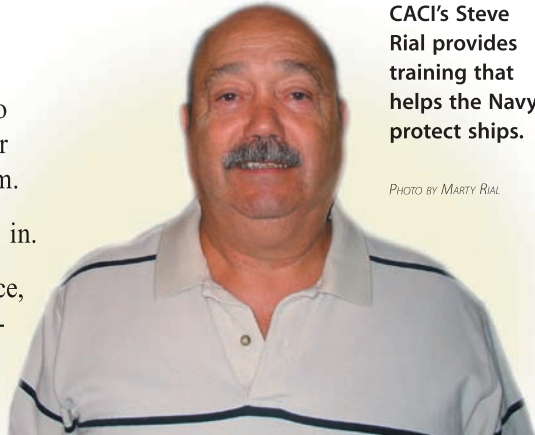

For ships at sea, quickly and correctly identifying approaching aircraft is critical to self-defense.

In the past, sailors relied almost exclusively on friendly aircraft flying very specific, predetermined flight patterns. But with today's stealth aircraft, missiles, and an ever-present terrorist threat, this approach is no longer effective. Now the job falls primarily to high-speed computers, advanced radar systems, and the sailors who run them.

That's where CACI's Steve Rial comes in.

A member of our Chesapeake, VA office, Steve has been training sailors on complex identification systems since 1995. He is an expert on systems in use on

aircraft carriers and cruisers and destroyers, as well as the Cooperative Engagement Capability, which integrates multiple data sources for a comprehensive picture of incoming aircraft or missiles.

CACI's Steve Rial provides training that helps the Navy protect ships.

PHOTO BY MARTY RIAL

Steve leads a team of trainers who travel throughout the world to work with sailors at-sea and ashore. They teach everything from system installation to the creation of the "if-then" statements used by these systems to enable rapid and accurate identification.

Steve's manager, Gary Lawson, believes Steve's background allows him to provide the Navy with unmatched expertise. "With over 22 years of Navy experience, Steve brings a proven skill set as well as a familiar perspective to our Navy users," Gary says. Clients agree, calling Steve a "true force multiplier" and a "great asset" to CACI.

You can find out more by contacting Steve at (757) 409-5914.

State-of-the-Art at State Department Reducing Paperwork for Diplomatic Corps

By Mary Beth Loutinsky

Two CACI teams are providing innovative support for the State Department's Office of Foreign Missions (OFM) in its effort to save time and reduce paperwork through web-based services.

Brian Lodwig, former Program Manager on the project, along with current Program Manager Charles Irons, and their team developed a web process known as E-Gov, which allows embassy personnel to electronically submit forms such as ID cards and driver's licenses directly to the State Department. OFM issues these forms to the diplomatic corps of foreign nations and international organizations assigned to the United States.

CACI's Technical Training Group instructor, Brian Helms, then trains users on the new system. So far, they've provided instruction for more than 400 individuals from embassies and

international organizations in the Washington, D.C. area, representing countries from Australia to Zambia, as well as organizations such as the World Bank and Intelsat.

CACI Senior VP Bob Blanc, who oversees the effort, notes that, "Our teams have done a terrific job in bringing state-of-the-art technology to OFM and its clients. We look forward to continuing this success as we expand our support nationwide in the next phase of the project."

To find out more about the E-Gov application, contact Charles Irons at (202) 895-3529, cirons@caci.com; for more about the Technical Training Group, contact Gary Reams at (703) 961-5195, greams@caci.com.

Jack London Named Government Contractor Executive of the Year

By Michael Pino

CACI's commitment to serving the highest priorities of our federal clients was recognized recently at the Third Annual Greater Washington Government Contractor (GovCon) Awards, when CACI Chairman, President, and CEO Dr. J.P. (Jack) London was named Executive of the Year.

In making their selection, the sponsors especially noted CACI's accomplishments in the areas of homeland security and national defense. Dr. London accepted the award on behalf of all CACI employees.

"CACI continues to work with our clients to strengthen our country and promote freedom and democracy both here and abroad," he said. "I am honored to

receive this award on behalf of our employees, who place honesty and integrity at the forefront of everything they do."

The GovCon awards are sponsored by the Northern Virginia Government Contractors Council, Professional Services Council, and *Washington Technology* magazine.

Making the Call in Greene County

By Robin Cooper

When Greene County, Ohio sought to create a central 911 emergency services dispatch center for its 22 municipalities, it looked for professional help in selecting the site. Who would know enough

about emergency support and Greene County to help make the call?

CACI would.

CACI's Beavercreek, Ohio and Eatontown, New Jersey offices have now collaborated to provide Greene County with a thorough and independent evaluation of the best location for the center. The recommendation will help reduce cost by consolidating current services without incurring any loss of effectiveness. CACI made the recommendation during a presentation to Greene County stakeholders.

"CACI's presence and stature in the local community made them comfortable with us," explains Chuck Feicht, Director of the Beavercreek office. "We decided to leverage our experience along with the reachback capability we have from related projects in New Jersey, Virginia, and elsewhere at the state and local levels."

Chris Bonin, program manager, and Bob Resetar, functional analyst, for the Homeland Security Team in Eatontown, are part of a team providing engineering, technical, and program management support for several emergency management clients and programs, and have significant 911 expertise. "The Eatontown team gave us great support throughout the project," Chuck says.

For more information, contact George at gmarentic@caci.com or (937) 429-8225 or Chris at (732) 578-2765, cbonin@caci.com.

CACI Team Supports Navy Robot System for Disabling Explosives

By Kate Poindexter

Dismantling explosive devices takes great care and training. It's a delicate job that requires quick, decisive, and nimble maneuvers. Robots have the technique hands down.

Now the U.S. Navy is fielding a robot for just such a purpose — and calling on a CACI logistics team to assess its success. That's a job *we* can do hands down.

The Washington, D.C.-based team led by Project Manager Teddie Gregory assists the Navy in evaluating the Man Transportable Robotic System (MTRS), a small robot used for high-risk ordnance disposal missions in war zones.

Operated by military personnel, the robot is sent into hazardous areas to disable explosives. Teddie's team provides support for logistics considerations

and suggests system improvements. The robot is just one of more than 200 acquisition systems Teddie and his team support.

"The MTRS technology is cutting edge, and our support helps increase protection for our troops," said Joy Hursey, the program's overall manager. "We're very proud of the work done by Teddie and his team and their outstanding commitment to the client."

For more information, contact Teddie at (202) 406-3546, tgregory@caci.com.
