

CACI's Eatontown Team Rings in the New Year With Key Army Award

Contract One of Largest in CACI History

By Mary Beth Loutinsky

CACI's Eatontown, New Jersey team enjoyed a special New Year's celebration when they received word CACI had won an important recompile contract with the U.S. Army. It was the indefinite delivery/indefinite quantity Engineering, Technical and Operations Support Services (ETOSS) award, which has a ceiling value of \$450 million.

ETOSS replaces the Army's Technical, Engineering, Fabrication and Operations Support (TEFOS) contract that Eatontown has supported since 2000. This contract continues more than 18 years of CACI service to the Intelligence and Information Warfare Directorate (I2WD).

With ETOSS, CACI will deliver scientific and engineering solutions to help I2WD modernize Army intelligence and information systems and capabilities. CACI experts will be developing and supporting some of the most innovative technologies in the field today, from satellite communications to the latest in armored vehicles.

ETOSS team members Joe Zirilli, John Dalton, Lou Lifrieri, and Myron Holinko are pleased to continue the 18-year tradition of CACI service to the Intelligence and Information Warfare Directorate.

"Our New Year's celebration was a few days after the 1st, but it was well worth the wait," says Lou Lifrieri, Eatontown Senior VP and team leader. "This was a critically important win for CACI. It validates our

commitment and strength in the intelligence community, and demonstrates the U.S. Army's ongoing confidence in our proven expertise. The Army also benefits from uninterrupted support for their role in the global war on terrorism."

John Dalton, Capture Team Manager, explains, "We had a phenomenal team working on this project. The time, the energy, and the commitment from everyone was tremendous, and equal to the task of continuing an 18-year legacy."

To learn more, contact Lou Lifrieri at (732) 578-5210 or e-mail lifrieri@caci.com.

Proposal team members Eric Gregory, Rudy Manuel, and John Elder, put in long hours with the team to produce a winning proposal.

Counting to 100

By Angela White

Among the guests at a recent ceremony held by a high-level national security agency were two CACI employees, Hoy J. Miller, Jr. and Conrad W. Warren. The event celebrated the long-term success of a key satellite program, and honored its contributors, including Hoy and Conrad, who have each supported the program for more than 35 years.

Hoy began his involvement in the program as a young airman in 1967, and Conrad started as an intelligence analyst in 1969. They have continued supporting the program in one way or the other over the years, and today are members of CACI's Technologies/Analysis and Information organization in our National Solutions Group.

Together, Hoy and Conrad have a combined overall intelligence background experience of 98 years – and are looking forward to 100!

According to Hoy, "The most gratifying moments for me have been seeing our

military men and women come home alive from military conflicts ranging from Vietnam to Iraq. After all, I have devoted my life to supporting the warfighter." Adds Conrad, "I keep coming back because I love the work and enjoy the people I work with."

"Hoy and Conrad are two of the most prestigious analysts in our field," says their director Mark Lewis. "I am honored every day that I get to work with them and learn from their experience."

Successful Connection

CACI Contracting System Named to InfoWorld 100 Top IT Projects

By Michael Pino

It required thousands of pages of functional design documents and tens of thousands of lines of code. Its implementation and training will encompass 25 locations across 5 time zones. It's a true web-based solution that connects clients and contractors. Welcome to CACI's PD-I project, winner of the 2005 InfoWorld Top 100 recognition.

Procurement Desktop for Industry (PD-I) is a contract management system

developed by Rich Heffner and his team in the Transformation Solutions Group.

PD-I's goal is two-fold: to provide aerospace and defense contractors with a highly scalable contract management solution, and to electronically integrate contract management processes between the Department of Defense (DoD) and its defense industry contractors.

PD-I has been operational for 18 months in the aerospace and defense industry.

During this time, there has not been a single disruption to daily operations. Users are saving money, streamlining processes, and doing better business.

InfoWorld, the popular online technology publication, recognized PD-I's success by naming the project to its list of 100 most innovative information technology projects in 2005. Moreover, PD-I was selected as a Top 20 finalist for InfoWorld's 2005 Project of the Year, to be announced in March 2006.

Army Invitation

By Kate Poindexter

America's soldiers are courageous individuals who are fiercely dedicated to serving our country and completing their mission. That was the key message delivered by General Peter J. Schoomaker, U.S. Army Chief of Staff, in his state-of-the-soldier report on January 12 at the Association of the United States Army (AUSA) Institute of Land Warfare Forum and exhibition in Arlington, Virginia.

CACI Chairman, President, and CEO Dr. J.P. (Jack) London joined the general at the head table, at the invitation of AUSA president General Gordon Sullivan (ret.). Also seated with them was Secretary of the Army Dr. Francis Harvey, and former Chief of Staff of the Army General Denny Reimer (ret.). CACI has been an active participant in the AUSA exhibition for many years and was proud to be on hand for the presentation.

"CACI has a long history with the AUSA and with the Army," said Dr. London. "We are committed to sup-

porting our troops and assisting the Army as it carries out the vital work of securing our homeland and defending our liberties."

For more information, contact Keith Kellogg at (703) 841-4090, kkellogg@caci.com.

According to Rich, "PD-I provides both DoD and industry an enormous opportunity to improve their contracting operations. The InfoWorld 100 award recognizes this great potential."

"The PD-I project would not have succeeded without tremendous team leadership and executive support," Rich adds. "Thanks go to team managers Patrick McQuillan, Justin Kaye, John Gorski, Mary Sabatino; team leaders Nancy Gaudino, David Price, Phyllis Imes, and Lamont Lyles; and senior technical architects Gene Sekera and Alan Seabright."

PD-I team members Patrick McQuillan, Gene Sekera (standing) and Justin Kaye and Mary Sabatino, (sitting) have helped create an award-winning system that links government and industry users in better contract management processes.

New Opportunities for Intelligence Careers

By Ryan Schnurr

CACI is now supporting a new program for a long-time client in the intelligence community, in which CACI will compete with other contractors to win task orders for IT infrastructure support.

Moreover, in order to meet this particular customer's objectives, CACI will be providing mission-critical IT services

for clients throughout the national security and defense arenas. The growth opportunities for both CACI and its people are considerable.

"Our Opportunity Office and Recruiting teams have hit the ground running," says Program Manager Sandy Montgomery, who leads the National Solutions

Group team supporting this effort. "They're bringing in highly qualified, cleared personnel, who'll have a great outlet to showcase their skills, as well as a chance to obtain and use higher-level clearances."

Adds Senior VP Mike Lustig, "This program offers a great chance for employees working on current CACI contracts to obtain the clearances necessary to work in the intelligence community. That's a process that takes a year or longer to complete."

The CACI team kicked off its efforts in November and is actively seeking its first win on the program. As they develop their pipeline of qualified CACI staff, there is little doubt it will come soon.

For more information, contact Sandy Montgomery at lmontgomery@caci.com.

Virtual Office Is Real-World Success

By Mary Beth Loutinsky

Traditional legacy support combined with cutting-edge "virtual office" innovation helped win a contract award for our Fleet Support organization in San Diego. The group, headed by Program Manager Stuart Gimber, is supporting Navy maintenance information systems throughout the Pacific.

"Thanks to our team of experts, we're able to offer the Navy the latest technologies for their maintenance information systems," Stuart says. "We know that the latest communications and analysis technologies are facing global threats that demand rapid fire, effective solutions."

Fleet Support team members work at various U.S. sites and across the Pacific, supporting Navy efforts to transform its

information system infrastructure for the entire Pacific Fleet.

Widely spread locations proved to be a bonus for the team, enabling them to develop a virtual office where experts in various disciplines come together to resolve overarching challenges facing the Pacific Fleet. Their success has earned them a reputation for resolving difficult and complex issues in a timely manner.

The CACI Fleet Support team is grounded by site administrators Jim Deitch, Donna Harrison, Vic Helzer, and David Snell, along with functional experts George Capito, Jim Graham, Alma

Grocki, John Malone, Brad Noren, and team leader Skip Mills.

For more information, contact Stuart Gimber at sgimber@caci.com.
