

## CACI's Iraq Memorials: Honoring Our Fallen Heroes

By Keith Gamboa

Recently, CACI Chairman, President, and CEO Dr. J.P. (Jack) London, President of U.S. Operations Paul Cofoni, and Chief Operating Officer Bill Fairl, hung three very special memorials on a wall of the reception area of the company's Ballston headquarters in Arlington, Virginia.

The three framed, commemorative displays honor members of our extended CACI family who have lost their lives in the defense of freedom, fighting the war on terrorism in Iraq. Each contains an American flag, a medallion, and a personalized brass plate. They are replicas of memorials that were sent to the families of those who were lost.

The memorials acknowledge the dedication and courage of these fallen heroes, and represent our deep appreciation for their sacrifice and ultimate service to our country. They are:

- Captain P. Christopher Alaniz of the U.S. Marine Corps, husband of Thelma Alaniz of our San Diego office.
- First Lieutenant Aaron Seesan of the U.S. Army, a nephew of CACI consultant Jennifer Burkhart.
- Corporal Christopher Weaver of the U.S. Marine Corps, son of David Weaver of our Dahlgren, Virginia office.

As Dr. London noted in remarks just before the memorials were hung in a place of honor, "These three American heroes embodied the spirit of democracy cherished by all of us at CACI. Their sacrifice will be honored and remembered by everyone who visits us."

When you're at our Ballston headquarters, please stop by and view the memorials yourself ... and say a personal, heartfelt thank you to these brave Americans.

# Gaining Momentum

By CJ Staton

CACI teams from BG02 and BG05 recently hosted more than 80 resource managers from the intelligence community and the Department of Defense at our CACI Business Solutions Center of Excellence in Chantilly, Virginia. The occasion was our first “Momentum Day” get-together.

CACI provides extensive support to intelligence and defense customers in all areas of resource management, including budgeting and planning, financial management, and auditing.

A significant portion of our efforts support CGI-AMS’s Momentum Financials suite, and all those present were current or new clients in various stages of implementing or using the product. The CACI Momentum Day provided an opportunity for all these participants to network with each other, and get to know our company better.

According to BG02’s Angela Landis Payne, who organized the event and was one of the presenters, “The turnout was very impressive, not only for the number of participants, but also for the breadth and level of the guests who

came — including executive decision-makers from several client agencies.”

This also was one of the largest gathering of resource managers who are going to work for the federal government’s Director of National Intelligence (DNI) organization, which was created last year and is still being staffed.

“The DNI is a key growth client for CACI,” Angela adds, “and this event further solidifies our position as the premier resource management systems and services provider for this key organization.”

Thanks go to Robert Beckmeyer, Karen Calpin, Ted Andrewlevich, Kimberly Sargent, Emma Rich, Cara Jo Streb,

## Tag — That’s It

By Keith Gamboa

It’s a microchip the size of your little fingernail. Yet it, and hundreds of other Radio Frequency Identification (RFID) “tags” just like it, enable logistics teams and supply officers to track boxes, crates, and cargo containers being transported from point A to point B.

Whether it’s for a major deployment overseas or emergency supply containers for Navy SeaBees supporting recon-

struction efforts after Katrina, the microchip tag on each receptacle can be identified

**Cliff Davis and his team are applying innovative radio frequency identification technology in a new test pilot supporting Trident submarines.**

# Primed for Alliant

## CACI Capabilities Showcased in GSA Expo

By Keith Gamboa

CACI was there, front and center, at the recent General Services Administration (GSA) Expo in San Antonio, Texas. This major procurement showcase for the federal civilian and military community is the place to be for vendors who want to capture the attention of federal procurement officials, decision-makers, and buyers.

CACI's booth featured our "Primed for Alliant" theme, reflecting our approach to bidding as a prime contractor on the upcoming GSA Alliant procurement. Alliant is a massive \$50 billion, 10-year solicitation that combines several existing GSA vehicles into one large contract.

Interaction with GSA officials during training sessions, social activities, and at the show venue offered exceptional opportunities for our team. A demo on an innovative, CACI-developed Air Force system, presented by Charlie Lynch of our new Technology Solutions and Integration (former ISS) group, also scored points with attendees.

CACI's GSA head Ted Buford, center, with GSA's Millennia Lite Team members Greg Norman, Shari Clark, and Jim Brown.

Ted Buford, who heads our GSA Program office, notes, "CACI currently holds a number of GSA contracts that government customers have used to secure over \$2 billion of business with us. We have the top-tier strengths and capabilities to continue serving GSA on Alliant, and the Expo was a great way to get that message to members of the GSA community."

CACI's Expo participants included Ted, Joel Kehm, Nancy Peters, Wayne Porter,

Charlie Lynch, Rich Welsh, Paul Shapiro, Teri Barbee, and Kristin Dufrene, along with Ron Poland and Bob Pollock from our team in San Antonio.

*Remember, Alliant is a major contract opportunity for CACI. If you are asked to support our Alliant proposal, please make it a priority and contribute with enthusiasm.*

**You can contact Ted at (703) 679-4177, [tbuford@caci.com](mailto:tbuford@caci.com).**

by a bar code scanner to quickly reveal what's in each box.

It's all part of the Automatic Identification Technology (AIT) Program for which CACI serves as prime contractor to the Navy. CACI has played a key role in AIT development, and now a new program created by our AIT team is being tested at the Fleet and Industrial Center (FISC) Puget Sound at Bangor, Washington.

FISC's primary mission is to manage supplies and repair parts for the Pacific Fleet's Trident submarines and their related maintenance facilities.

The new program is the first full-production pilot of what's known as "passive" RFID technology, where power supplied by the reader, rather than the tag, is used to scan the information.

If successful, the program could mark the beginning of RFID use for logistics applications throughout the Navy and the Department of Defense.

"We're proud to help the Navy transform the way it manages supplies to meet the requirements of today's fighting force," says Cliff Davis, CACI's AIT Program Manager. "Our goal is to

continue to apply cutting-edge technology to support Navy needs."

# CACI Recognized for Small Business Support

## Receives Department of Justice Award

By Michael Pino

CACI has received an award from the Department of Justice (DOJ) for our contributions to DOJ's small business subcontracting goals in 2005. The award was presented to Chairman, President, and CEO Dr. J.P. (Jack) London, President of U.S. Operations Paul Cofoni, and Contracts Executive Director Ray Rollins in a ceremony at the Robert F. Kennedy Main Justice Building in Washington, D.C.

Like all federal agencies, DOJ has a mandate from the Small Business Administration to meet goals for the employment of small business subcontractors. CACI's ability to include small businesses as teammates on our contracts has played a key role in enabling DOJ to satisfy these goals.

The CACI subcontractors are engaged primarily on our \$950 million "Mega 2" and \$43 million Automated Debt Collection Management (ADCM) contracts.

PHOTO COURTESY DEPARTMENT OF JUSTICE

Paul Cofoni and Dr. London join Ray Rollins, second from right, in accepting CACI's Small Business Award from DOJ Deputy Assistant Attorney Michael Allen.

Under Mega 2, CACI and its teammates provide information technology and automated litigation support for DOJ and other federal agencies.

Under ADCM, CACI and its subcontractors have developed and now sustain a nationwide system for DOJ to track and collect debts that range from student loans to Superfund recoveries.

"CACI is committed to supporting government goals that increase opportunities for all businesses and make diverse capabilities available to our government clients," said Dr. London. "We believe America's tradition of small business ownership strengthens our economy and serves as an inspiration for others around the world."

For more information, contact Ray Rollins at (703) 679-3202, rrollins@caci.com.

## What Would You Do With **\$40,000?**

Find out now, with our **BIGGER and BETTER Employee Referral Program!**

- ★ Increased bonus amounts of up to \$5,000 for successful new hires
- ★ Special campaign of significantly higher awards **through June 30**
- ★ More quarterly award winners
- ★ Up to \$40,000 in cash or equivalent prizes

To learn more, visit our Employee Referral Program section on [CACInet](http://CACInet) or contact Larry Clifton at (703) 460-1328, lclifton@caci.com.
